

PROJECT ENGINEER SUSPENSION

09.12.2021

100% based in Biel (CH) or Freiburg (D)

THIS EXCITING CHALLENGE IS WAITING FOR YOU

- Specification-related development of technical solutions for existing and new DT Swiss Suspension Products
- Further development of testing machines and methods as well as execution of tests and FEM analyses for product releases
- Support and supervision of the suspension assembly in our subsidiary in Taiwan
- Preparation of technical and project relevant documentation as well as coordination of patent Management
- Coordination of project documents as well as the project-related information flow, prototype orders, and project meetings. Organization of test material
- Support of project engineers and designers in technical and administrative matters
- Contact person for interdepartmental interfaces with departments such as Product Management, Purchasing and Production

THESE CHARACTERISTICS DISTINGUISH YOU

- Completed Masters degree in Mechanical Engineering or equivalent
- Extensive product development experience in cross-cultural environments
- Several years of practical experience in a comparable role
- Very good written and spoken German and English skills
- Excellent MS-Office as well as good SAP knowledge
- CAD knowledge (Autodesk Inventor) as well as FEM experience, ideally with ANSYS
- Passionate mountain biker with quick comprehension and a solution-oriented way of thinking
- Independent and resilient team player with exemplary communication skills
- Reliable organizational and coordination skills with a strong commitment to the delivery of high-quality products
- Technical flair complemented by conceptual strength
- Flexible, motivated and open
